Module 2 — Patient Management

The patient module is the heart of the system. Every person who visits the hospital is registered here.

Module 5 — Prescriptions

Doctors can write fully digital prescriptions for their patients. Each prescription records the diagnosis, medical advice, prescribed medicines with dosage instructions, and a follow-up date.

Other Screenshots

Database PostgreSQL 15

Stores all hospital data securely via pgAdmin 4.

The screenshot displays the pgAdmin 4 interface for a PostgreSQL 15 database. The left sidebar shows the 'Object Explorer' with the 'patients_patient' table selected. The table has 17 columns: id (uuid), patient_id (character varying(20)), first_name (character varying(100)), last_name (character varying(100)), date_of_birth (date), gender (character varying(1)), blood_group (character varying(10)), nid_number (character varying(15)), phone (character varying(15)), emergency_contact (character varying(100)), address (text), district (character varying(100)), allergies (text), chronic_conditions (text), created_at (timestamp with time zone), updated_at (timestamp with time zone), and is_active (boolean). The main pane shows a SQL query: `SELECT * FROM public.patients_patient ORDER BY id ASC`. The 'Data Output' tab displays the results of the query, showing 2 rows. The status bar at the bottom indicates 'Total rows: 2' and 'Query complete 00:00:00.411'.
